

AZIEL RUNTIME — Functions That Should Remain Off, Refused, or Gated by Design

REMAIN-OFF-BY-DESIGN-2026-09-10 · 2026-09-10 · Author / identity: **Aziel Eliab** only.

Not a Softwares-tab product. Not a FragGate slug. This ingest does **not** enable any item below.

PDF path: docs/designs/REMAIN-OFF-BY-DESIGN-2026-09-10.pdf (binary beside this markdown when generated). If the PDF cannot be embedded, this markdown is the full inventory.

Rule

These items do **NOT** count as missing implementation when they are correctly **OFF**, **REFUSED**, or **GATED**.

Correct behavior prevents unsafe, bypass, destructive, or architecture-breaking execution.

- ****OFF**** — default disabled; GET/status/cite never arms it.
- ****REFUSE**** — named stub / halluc / lamb / gate refuse. Not silent success. Not a fake 200.
- ****GATED**** — operator bearer, `REQUIRE\_TOKEN`, or FragGate-only. Public callers do not self-grant.

A later agent that "implements" one of these on the public mesh has broken the constitution, not closed a gap.

Companion: [FEATURE-STATE-2026-09-10](../audit/FEATURE-STATE-2026-09-10.md) lists **gaps vs intentional OFF** (50 items: OFF / STUB / LOCAL / NOT IMPLEMENTED / PARTIAL). **This paper is the constitutional OFF set** (33 items). FEATURE-STATE may name unfinished work. This paper names work that must stay correctly off.

Inventory (33)

#	Item	Mode	FEATURE-STATE	Live signal
1	Mesh auto-enable	OFF	1, 3	`GET /v1/mesh` never enables; empty POST → `MESH-NEED-BEARER`
2	QNS public proxy	OFF	2	`POST /v1/qns/via` → `QNS-NO-PROXY`
3	ARK destructive / hosted unlock	REFUSE	8	stub `scorch` / `wipe` / `unlock` / `encrypt`
4	WhistleLock send / mail / release	REFUSE	9	stub `send` / `mail` / `release`
5	MirageGrid VPN-hop / tunnel / mesh	REFUSE	10	stub `vpn-hop` / `hop` / `tunnel` / `mesh`
6	AzielTether VPN / arm / mesh-join	REFUSE	11	stub `vpn` / `arm` / `mesh-join`
7	VeilLock remote surveillance	REFUSE	7	stub `inject` / `intercept` / `facetime`
8	AZ-OS exec / shell / lattice	REFUSE	12	stub `exec` / `shell` / `lattice`
9	AZMail deanonymize	REFUSE	21	stub `deanonymize` / `unmask` / `identify` / `harvest`
10	PeaceLock fabricate	REFUSE	15	stub `transcript` / `motive` / `counterfactual` / `invent`
11	4DMap `truth_score`	REFUSE	16	`4DM-TRUTH-REFUSE`

12	4DMap `invent_mark`	REFUSE	16	stub `invent_mark`
13	4DMap `backdate_class`	REFUSE	16	stub `backdate_class`
14	AZBrowser Tor / phoenix wipe	REFUSE	17–18	stub `tor_exit` / `phoenix_wipe`
15	AZNet payload hosting	OFF	25	stub `payload_host` / `serve_content_for_peer`
16	AZHub auto-unlock	OFF	27	`AIH-AUTO-UNLOCK-REFUSE`
17	AZInterface auto-unlock	OFF	28	`AIH-AUTO-UNLOCK-REFUSE`; cycles pre-locked
18	Public rollback API	OFF	31	`/v1/rollback` 404
19	RoseClock rollback	OFF	32	stamps `rollback: false`; `rollback()` refuses
20	LambGate as second door	OFF	33	`lambgate=false`; Lamb Lens is fabric after FragGate
21	AZPIPE as Softwares slug	OFF	36	no Softwares-tab card; fabric only
22	`/v1/azpipe/arch` mutate	OFF	37	cite/read only; other `/v1/azpipe/*` 404
23	AKM as Softwares door	OFF	38	fabric `slug=memory`; `software_tab=false`
24	AKM `rebuild-index`	GATED	39	`AKM-OPERATOR` without operator
25	AKM posterior authorizes	OFF	40	`authorizes_action=false`; posterior ≠ truth
26	Unauth session mutate	OFF	41	`REQUIRE_TOKEN=1` gates open/policy/exec/close
27	Hallucinated-tool fallback	REFUSE	42	`FG-HALLUC-TOOL` (e.g. `zd30`)
28	Destructive / fantasy fallback	REFUSE	43	`FG-STUB` / named stub ops — never fake exec
29	Thin MCP	GATED	44	no flat `{slug}_{op}` pile; discover → describe → call
30	`/p/{slug}/{op}` as agent path	OFF	46	proxy only; not exec; not default agent path
31	FragGate as catalog engine	OFF	47	extras/kernel door; `engine=false`
32	Mesh as catalog engine	OFF	48	extras/kernel rollout; not Softwares-tab
33	11 domains as doors	OFF	49	isolation labels; `domains_are_doors=false`

lumen_panel stays refused with the 4DMap cluster (FEATURE-STATE #16). It is covered by items 11–13 and item 28. Do not add a Lumen panel.

1. Mesh auto-enable — OFF

Default radios / bearers are **OFF**. GET /v1/mesh and GET /v1/mesh/status return rollout counts and stay enabled=false. They never turn LIVE. Empty POST /v1/mesh/enable is MESH-NEED-BEARER. A login-shaped bearer is MESH-BAD-BEARER. Library host overlay may 409 stricter-OFF; that is not an enable.

Enabling from a GET, a site ping, or a hub Softwares click would be a bypass of QNM-BUILD-1.0. Full node process stays local qnm-node/.

Do not: auto-enable, invent a login mesh, add a Node Gate / IP panel.

FEATURE-STATE #1 (radios OFF), #3 (public auto-enable DISABLED).

2. QNS public proxy — OFF

GET /v1/qns cites QNS-CD-1.0 (photon QNS1 1.3; local qnsd on 127.0.0.1). The Worker does not emit, via, admit, wipe, or forward. POST /v1/qns/via and other mutate verbs return **403 QNS-NO-PROXY**.

A public via proxy would be a remote control plane over loopback photon vias. That is architecture-breaking.

Do not: proxy 127.0.0.1, add Softwares slug qns / qnsd, treat QNS as a FragGate engine.

FEATURE-STATE #2.

3. ARK destructive / hosted unlock — REFUSE

Stub ops: scorch, wipe, unlock, encrypt. Hosted ARK never unlocks a vault. Advisory sweep / levels / health / skill stay live.

Do not: host wipe, invent unlock success, treat ARK as a kernel.

FEATURE-STATE #8.

4. WhistleLock send / mail / release — REFUSE

Stub ops: send, mail, release. Live ops are hash/canon preview only. WhistleLock is not a mailer and not a release valve.

Do not: send, mail, or release on the public mesh.

FEATURE-STATE #9.

5. MirageGrid VPN-hop / tunnel / mesh — REFUSE

Stub ops: vpn-hop, hop, tunnel, mesh. MirageGrid is not a VPN. GodLock and MirageGrid are not hop fabrics on this Worker.

Do not: stand up a public hop mesh.

FEATURE-STATE #10.

6. AzielTether VPN / arm / mesh-join — REFUSE

Stub ops: vpn, arm, mesh-join. AzielTether verifies; it does not arm a tunnel or join a mesh from the public door.

Do not: VPN, arm, or mesh-join on this Worker.

FEATURE-STATE #11.

7. VeilLock remote surveillance — REFUSE

Stub ops: inject, intercept, facetime. Public execution is local_only (FEATURE-STATE #6). VeilLock does not inject into FaceTime and does not intercept device media on the public mesh.

Do not: host inject / intercept / FaceTime hooks.

FEATURE-STATE #7.

8. AZ-OS exec / shell / lattice — REFUSE

Stub ops: exec, shell, lattice. AZ-OS status/health/skill are advisory. Hosted AZ-OS is not a remote shell and not a lattice controller.

Do not: exec, open a shell, or expose a lattice control plane.

FEATURE-STATE #12.

9. AZMail deanonymize — REFUSE

Stub ops include deanonymize, unmask, identify, whois, harvest, credential_capture, login, plus SMTP/send/mail/deliver. Anonymous mesh LIVE_OPS stay default OFF (FEATURE-STATE #22). SMTP is not implemented and must not be "finished" as a public MTA.

Do not: deanonymize, harvest credentials, or stand up SMTP.

FEATURE-STATE #21.

10. PeaceLock fabricate — REFUSE

Stub ops: transcript, transcribe, motive, counterfactual, invent, waive-duty, bypass-duty. Transcript / counterfactual / motive stay **ABSENT**. HARD_DUTY refuses a silence receipt when a non-waivable duty applies. PeaceLock is receipts, not speech.

Do not: invent what was said, score motive, or waive HARD_DUTY.

FEATURE-STATE #15.

11. 4DMap `truth\_score` — REFUSE

truth_score / truth → 4DM-TRUTH-REFUSE. 4DMap is a four-axis inspection frame $T/\Delta/\Gamma/\Pi$ (4DM-WP-1.0). It is not a sequential gate and not a truth authority.

Do not: emit a generic truth score as security authority.

FEATURE-STATE #16.

12. 4DMap `invent\_mark` — REFUSE

Cards hold declared pins. 4DMap does not invent marks. Stub invent_mark. Motto: inspect on four axes; do not invent a mark.

Do not: synthesize pins, spans, or class marks the operator did not declare.

FEATURE-STATE #16.

13. 4DMap `backdate\_class` — REFUSE

Stub backdate_class. RoseClock / TemporalLock stay forward. 4DMap does not rewrite Γ class in the past.

Do not: backdate class, rewind a walk, or stamp a prior axis as if it had always been so.

FEATURE-STATE #16.

14. AZBrowser Tor / phoenix wipe — REFUSE

Stub ops: `tor_exit`, `tor`, `onion`, `phoenix_wipe`, `wipe`, `scorch`, plus Chromium/proxy/harvest/surveillance verbs. AZBrowser is the Lamb Lens ethical research browser (AZB-1.0). Not a Tor exit. Not a phoenix controller. Not Chromium.

Do not: exit Tor, phoenix-wipe, or claim a visit that was not fetched.

FEATURE-STATE #17–18.

15. AZNet no payloads — OFF

AZNet is a silent verification side-net (AZN-WP-0.1). Stub `payload_host`, `serve_content_for_peer`, `analytics`, `ranking`, `repair_integrity_bypass`. Pairing with AZBrowser is order/token only — not a shared payload host.

Do not: host peer content, rank, or bypass integrity repair.

FEATURE-STATE #25.

16. AZHub auto-unlock — OFF

AZHub is a Blank Key / neutral spatial container (AIH-WP-1.0). `auto_unlock` / `unlock` / `completeness` / `ranking` / `remote scorch refuse` (AIH-AUTO-UNLOCK-REFUSE, AIH-COMPLETENESS-REFUSE, AIH-RANKING-REFUSE, AIH-SCORCH-REFUSE). Hub never interprets meaning and never fires completeness.

Do not: auto-unlock, rank, or scorch remote from Hub.

FEATURE-STATE #27.

17. AZInterface auto-unlock — OFF

AZInterface page cycles are pre-locked: OFF / integrity / ON / FULL SHUTDOWN / MEMORIAL. No skip. No invented cycle. Same auto-unlock / completeness / ranking / remote-scorch refuse family as Hub. Integrity recorded does not auto-unlock to ON.

Do not: invent or skip a cycle; do not auto-unlock Interface.

FEATURE-STATE #28.

18. Public rollback API — OFF

POST /v1/rollback and POST /v1/roseclock/rollback are **404**. There is no public rewind surface. Recovery language is forward `action_class` only (restore / correct / quarantine as new transitions).

Do not: add a public rollback route.

FEATURE-STATE #31.

19. RoseClock rollback — OFF

RoseClock sequence never decreases. Stamps carry `rollback: false`. `rollback()` returns `refuse: rollback-forbidden`. Memory `op=rollback` is FG-STUB. Sentinel carries `rollback: false`.

Do not: rewind RoseClock, TemporalLock, or ChainLock history.

FEATURE-STATE #32.

20. LambGate is not a second door — OFF

MASTER-33: FragGate is THE single door. Lamb Lens is fabric ethics **after** FragGate (lambgate=false, fraggate_single_door=true). PASS / REFUSE / HOLD-UNCERTAIN. Absolute prohibitions refuse (FG-LAMB-REFUSE). LambGate is not a hop and not a Softwares-tab product.

Do not: put Lamb Lens before FragGate, add a LambGate slug, or treat ethics as a second door.

FEATURE-STATE #33.

21. AZPIPE is not a Softwares-tab slug — OFF

AZPIPE (AP-WP-0.2, magic FLD3) is LIVE fabric. fld3-wire is internal. There is no Softwares-tab card azpipe. Domains after AZPIPE are isolation labels, not extra pipes.

Do not: add slug azpipe to /v1/software.

FEATURE-STATE #36.

22. `/v1/azpipe/arch` does not mutate — OFF

GET / HEAD / POST /v1/azpipe/arch cites the locked MASTER-33 strip (same payload as GET /v1/fraggate pipeline). cite=true, software_tab=false, fraggate_slug=false. Other /v1/azpipe/* paths 404 with a hint to /arch. No mutate. No mesh enable. No new door.

Do not: accept arch writes, reorder hops, or treat /arch as exec.

FEATURE-STATE #37.

23. AKM is not a Softwares-tab door — OFF

AKM-TRIAD-1.0 is LIVE fabric behind FragGate (POST /v1/memory/*, MCP memory_*, slug=memory). Not a Softwares-tab product. ChainLock remains the immutable ledger; the adaptive index is derived and rebuildable.

Do not: add memory / akm to the Softwares-tab.

FEATURE-STATE #38.

24. AKM `rebuild-index` is operator-gated — GATED

POST /v1/memory/rebuild-index without an operator token is **AKM-OPERATOR**. Public observe/resolve/calibrate/recall stay on the FragGate door. Rebuild is not a public self-grant.

Do not: invent a token bypass or make rebuild public.

FEATURE-STATE #39.

25. Posterior never authorizes — OFF

Bayesian posterior is calibrated belief strength, not truth. Triad assembly sets `authorizes_action=false`. No AI component self-grants `MODEL_UPDATE`, `TRUST_UPDATE`, `NETWORK_EGRESS`, `MESSAGE_SEND`, or `LOCAL_EXEC` from a posterior.

Do not: treat triad/posterior as permission to act.

FEATURE-STATE #40.

26. Unauthenticated session mutate — OFF

When `REQUIRE_TOKEN=1` and `RUNTIME_TOKEN` is set, session open/policy/exec/close and MCP session tools / `runtime_run` require `Authorization: Bearer` or `X-Aziel-Runtime-Token`. Missing secret fail-closes ready (503). Catalog / health / skill / FragGate list stay public. Proxy /p stays public and is not exec.

Do not: leave session mutate open in production, or invent per-user logins.

FEATURE-STATE #41.

27. Hallucinated-tool fallback — REFUSE

Unknown slug (example: `zd30`) → **FG-HALLUC-TOOL**. Flat leftover `{slug}_{op}` names are not in `tools/list`. That is hallucination with a receipt, not exec.

Do not: invent `ZD30`, add a compatibility exec for hallucinated names, or return a fake 200.

FEATURE-STATE #42.

28. Destructive / fantasy fallback — REFUSE

Named stub verbs (`scorch` / `wipe` / `send` / `vpn` / `inject` / `blend` / `exec` / `unlock fantasies`) return **FG-STUB** or the engine's named refuse. `DecisionGate BLOCK` / `Lamb REFUSE` / `SweepGate isolate close` at the hop. No handler means no exec.

Do not: map a stub to a live op "for completeness." Completeness is not a reason to enable.

FEATURE-STATE #43.

29. Thin MCP — GATED

Public door is `discover` / `route` / `refuse`: `fraggate_list` → `fraggate_describe` → `fraggate_call`. Named fabric tools (`mesh_*`, `chainlock_*`, `memory_*`) are listed; the 1.5.0 flat pile is not. `PUBLIC_MCP_TOOL_MAX` is a cap, not a dump target. Refuse `exist.mcp` points at live `tools/list`.

Do not: restore the flat `{slug}_{op}` `tools/list`.

FEATURE-STATE #44.

30. `/p/{slug}/{op}` is not the default agent path — OFF

`GET/POST /p/{slug}/{op}` is a **proxy**. Proxy without a session receipt is **not** exec. Agents use FragGate (`POST /v1/fraggate/call / MCP fraggate_call`). `/p` remains for catalog cards, human crawl, and service-binding front doors.

Do not: teach agents that /p is exec, or make proxy the default path.

FEATURE-STATE #46.

31. FragGate is not a catalog engine — OFF

FragGate is THE single door (kernel <https://github.com/AzielEliab/fraggate>, FG-0.1). It appears on `catalog.extras[]`, not as a Softwares-tab engine (`engine=false`). Every catalog slug that is live is a true engine **behind** FragGate — FragGate itself is not one of the 33.

Do not: add FragGate as a Softwares-tab product or a second door.

FEATURE-STATE #47.

32. Mesh is not a catalog engine — OFF

Mesh is the QNM-BUILD-1.0 suite rollup extra (`kind=kernel`). Not a Softwares-tab card. Not a normal catalog engine. FragGate `slug=mesh` is the rollup/enable surface with radios default OFF.

Do not: promote mesh to Softwares-tab or treat GET mesh as a product engine.

FEATURE-STATE #48.

33. Eleven domains are not doors — OFF

MASTER-33 Internal Domain Layer: 11 domains / 33 softwares are **isolation labels**.

`/v1/software.domains.domains_are_doors=false`. Softwares stay on the Softwares-tab with `domain + domain_id`. Placements (AZInterface, DecisionGATE, ForgeReceipts, FragGate, mesh, memory) are not extra doors.

Do not: add per-domain public doors, or treat a domain as a FragGate slug.

FEATURE-STATE #49.

What this paper is not

- Not a gap list. Gaps live in FEATURE-STATE (NOT IMPLEMENTED / PARTIAL / STUB-being-landed).
- Not permission to enable EmbryoLock wipe/unlock on the public mesh (FEATURE-STATE #4 — parallel land is live+local-destructive-boundary only).
- Not permission to promote AZChat (FEATURE-STATE #5).
- Not a Softwares-tab product, not a FragGate slug, not a fleet-completeness claim.
- Not a deploy. This ingest is cite-only.

Do not do from this paper

Do not enable mesh from GET. Do not proxy QNS. Do not host ARK unlock / wipe, WhistleLock send, MirageGrid hop, Tether VPN, VeilLock inject, AZ-OS exec, AZMail deanonymize, PeaceLock fabricate, 4DMap truth/invent/backdate, AZBrowser Tor/phoenix, or AZNet payloads. Do not auto-unlock Hub or Interface. Do not add rollback. Do not add LambGate. Do not put AZPIPE or AKM on the Softwares-tab. Do not let posterior

authorize. Do not dump flat MCP. Do not make /p exec. Do not make FragGate, Mesh, or the 11 domains into extra doors.
